# Fact Sheet

## Supervising Electrical Installation in Building Construction

### Course Description

This is a 2-day seminar workshop designed for engineers to upgrade their supervisory skills and knowledge in building electrical construction. The course consists of lecture/discussion and workshop covering the proper electrical installation works.

### Course Objectives:

At the end of this seminar, the participants shall be able to;

- ✓ Read and interpret electrical plans and drawings.
- ✓ Plan electrical construction works activities
- ✓ Implement rough-in and wiring works in electrical execution
- ✓ Implement the necessary testing needed prior to commissioning.

### Target Participants:

- Electrical project engineers
- Electrical engineering graduates
